Dear PT Distributor Partners,

As noted within our 12/12/24 price adjustment notice (which was effective Monday, 2/3/25) rising raw material costs remain a challenge. We are not certain of the impact of tariff conflicts on these raw materials, however between this announced adjustment in December, and the effective date in February, we received notice of a double digit increase on aluminum ingot.

We continue our work to minimize the impact of this but are forced to institute a narrow price adjustment of 5% increase for our aluminum products effective Monday, 5/19/25.

This will only impact our products built in PT facilities, proudly made in the USA, which start out using the high quality, aircraft grade aluminum ingot going through our foundries, heat-treat process, machining operations, and packaging. Therefore, it will not impact our aluminum ProGrip™ sleeves and ferrules, nor will it impact any other made in the USA PT Products.

Your PT Representative and Customer Service Team will have the revised net prices available to send out upon request, closer to the effective date.

Orders for quantities beyond normal purchase volumes may be reviewed for acceptance prior to the adjustment date. Orders designated for immediate shipment ONLY, receive pre-adjustment pricing.

Again, thank you for your partnership and customer loyalty to PT. We will continue to do everything we can during these trying times to minimize the impact on you, our Distributor Partners.

Best Regards,

Brent J. Lilly,
Vice President, Sales & Marketing
